C;Comment: The mechanism of association with the membrane of the intestinal brush border embrane attachment using a signal-anchor sequence.
C;Comment: Conversion from membrane-bound to soluble forms may involve further processin C;Complex: mature enteropeptidase is variously reported to contain two (heavy and light) Lfide linked
C;Function:
A;Description: cleaves propeptide from trypsinogen to produce active trypsin
A;Pathway: intestinal digestive hydrolase cascade
C;Superfamily: enteropeptidase; Clr/Cls repeat homology; LDL receptor ligand-binding rep:
C;Keywords: glycoprotein; hydrolase; intestine; serine proteinase; transmembrane protein;

plasmin (EC 3.4.21.7) precursor - pig (fragment)

N;Alternate names: plasminogen

N;Contains: miniplasminogen

C;Species: Sus scrofa domestica (domestic pig)

C;Date: 07-Sep-1990 #sequence_revision 01-Nov-1996 #text_change 18-Jul-1997

C;Accession: S03733; S03737; A25834

R;Schaller, J; Marti, T; Roesselet, S.J.; Kaempfer, U.; Rickli, E.E.

Fibrinolysis 1, 91-102, 1987

A; Residues: 22-27 <LIZ>
C; Comment: Plasminogen is synthesized by the kidney and is present in plasma and m C; Comment: Plasminogen is converted into plasmin by plasminogen activators, both p mediately after dissociation from the clot. In the presence of the inhibitor, the e inhibitor, the activation involves also removal of the activation peptide.
C; Comment: Stromelysin 1 (see PIR: KCMSS1) acts on plasminogen to produce angiostate eful in treating solid tumors.
C; Function:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A;Cross-references: GB:J04766; NID:g200402; PIDN:AAA50168.1; PID:g2 R;Lijnen, H.R.; van Hoef, B.; Beelen, V.; Collen, D.
